**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ryan Schneider on November 21, 2003.

The application has been amended as follows:

Cancel claims 11 and 25.

Claim 8, line 11 after " $T_{c+1}$ " insert --; wherein  $T_n$  is the reference temperature of the cooking medium, the controller compensating for the introduction of a new cooking medium by adjusting the cooking cycle temperature  $T_c$  for each cooking cycle to be greater than or equal to the reference temperature  $T_n$ ,

wherein the cooking cycles  $c$  from 1 to 30, the difference between  $T_1$  and  $T_{30}$  is a temperature beginning at approximately 10°F over  $T_n$  and falling to approximately 3°F over  $T_n$ --.

Claim 12, line 1 delete "11" and insert --8--.

Claim 13, line 1 delete "11" and insert --8--.

Claim 24, line 10 after "multiplier" insert --; wherein the non-linear cooking compensation multiplier is the formula  $A$  raised to the power  $((B \times \Delta_{\text{TEMPERATURE}})/C)$ ;

where  $A$  is approximately 1.41421;

Art Unit: 1761

where B is 2;

where C is an exponential growth factor constant related to the particular food item;

and where  $\Delta_{\text{TEMPERATURE}}$  is the product reference temperature – the sensed cooking medium temperature--.

Claim 26, line 1 delete “25” and insert --24--.

Claim 27, line 1 delete “25” and insert --24--.

***Allowable Subject Matter***

1. Claims 8-10, 12-24, and 26-27 are allowed.

The following is an examiner's statement of reasons for allowance: the method of cooking of independent claim 8 defines over the prior art of record since the prior art does not teach, suggest, nor render obvious heating the cooking medium to  $T_c$  and using a controller to control the heating through cooking cycles wherein  $T_c$  is greater than  $T_{c+1}$ , wherein  $T_n$  is the reference temperature of the cooking medium, the controller compensating for the introduction of a new cooking medium by adjusting the cooking cycle temperature  $T_c$  for each cooking cycle to be greater than or equal to the reference temperature  $T_n$ , wherein the cooking cycles  $c$  from 1 to 30, the difference between  $T_1$  and  $T_{30}$  is a temperature beginning at approximately 10°F over  $T_n$  and falling to approximately 3°F over  $T_n$ ;

the method of cooking of independent claim 14 defines over the prior art of record since the prior art does not teach, suggest, nor render obvious heating the

cooking medium to  $T_c$  and using a controller to control the heating through cooking cycles wherein  $T_c$  is greater than  $T_{c+1}$ , wherein  $T_n$  is the reference temperature of the cooking medium, the controller compensating for the introduction of a new cooking medium by adjusting the cooking cycle temperature  $T_c$  for each cooking cycle to be greater than or equal to the reference temperature  $T_n$ , wherein for cooking cycles  $c$  from 1 to 29, the difference between  $T_1$  and  $T_{29}$  is a temperature beginning at approximately 15°F over  $T_n$  and falling to approximately 4°F over  $T_n$ , wherein for cooking cycles  $c$  from 30 to 99, the difference between  $T_{30}$  and  $T_{99}$  is a temperature beginning at approximately 3°F over  $T_n$  and falling to approximately 2°F over  $T_n$ , wherein for cooking cycles  $c$  from 100 to 1000, the difference between  $T_{100}$  and  $T_{1000}$  is a temperature beginning at approximately 2°F over  $T_n$  and falling to approximately 0°F over  $T_n$ ;

the method of independent claim 15 defines over the prior art of record since the prior art does not teach, suggest, nor render obvious heating the cooking medium to  $T_{\text{desired}}$  plus a stratification offset; the method of independent claim 21 defines over the prior art of record since the prior art does not teach, suggest, nor render obvious setting a predetermined cooking medium temperature drop rate, sensing the cooking medium for temperature drop rates, starting the cook cycle if the predetermined temperature drop rate is found or reviewing the sensed cooking medium temperature drop rates for a second amount of time if it is not found;

the method of cooking of independent claim 24 defines over the prior art of record since the prior art does not teach, suggest, nor render obvious determining an actual cook time by adjusting the initial cook time, with the actual cook time being the

initial cook time multiplied by a non-linear cooking compensation multiplier, wherein the non-linear cooking compensation multiplier is the formula A raised to the power

$((B \times \Delta_{\text{TEMPERATURE}})/C)$ ;

where A is approximately 1.41421;

where B is 2;

where C is an exponential growth factor constant related to the particular food item;

and where  $\Delta_{\text{TEMPERATURE}}$  is the product reference temperature – the sensed cooking medium temperature.
